Photo Composition

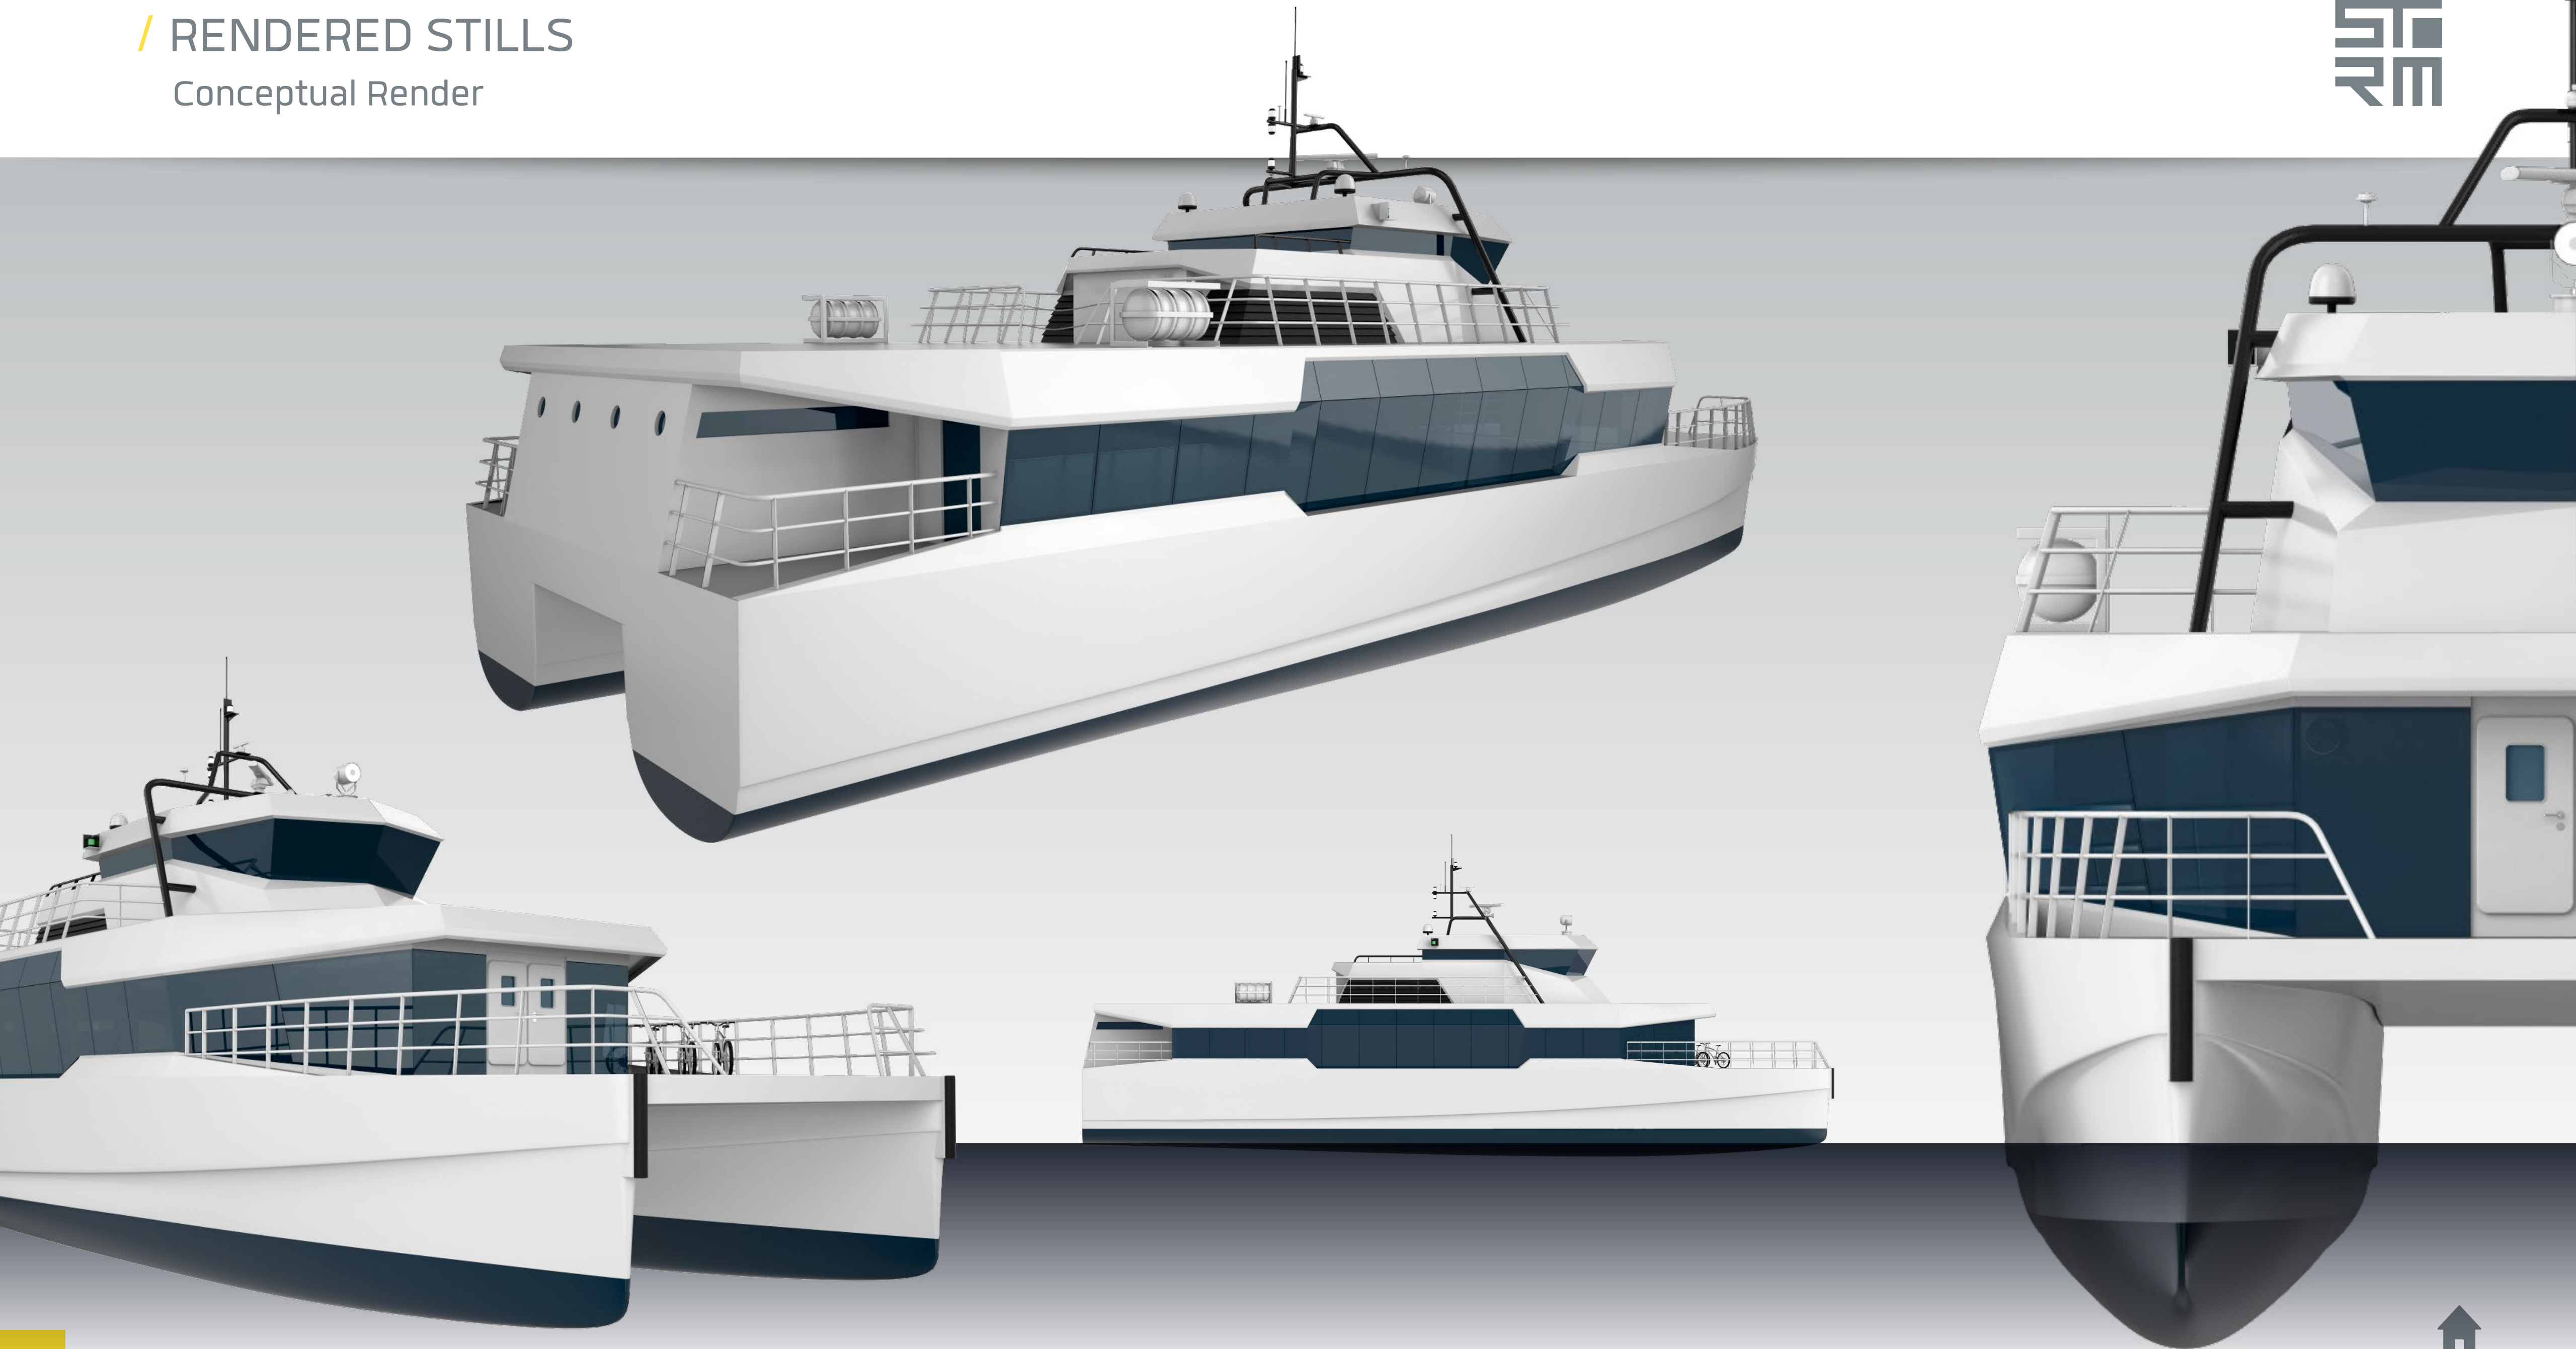

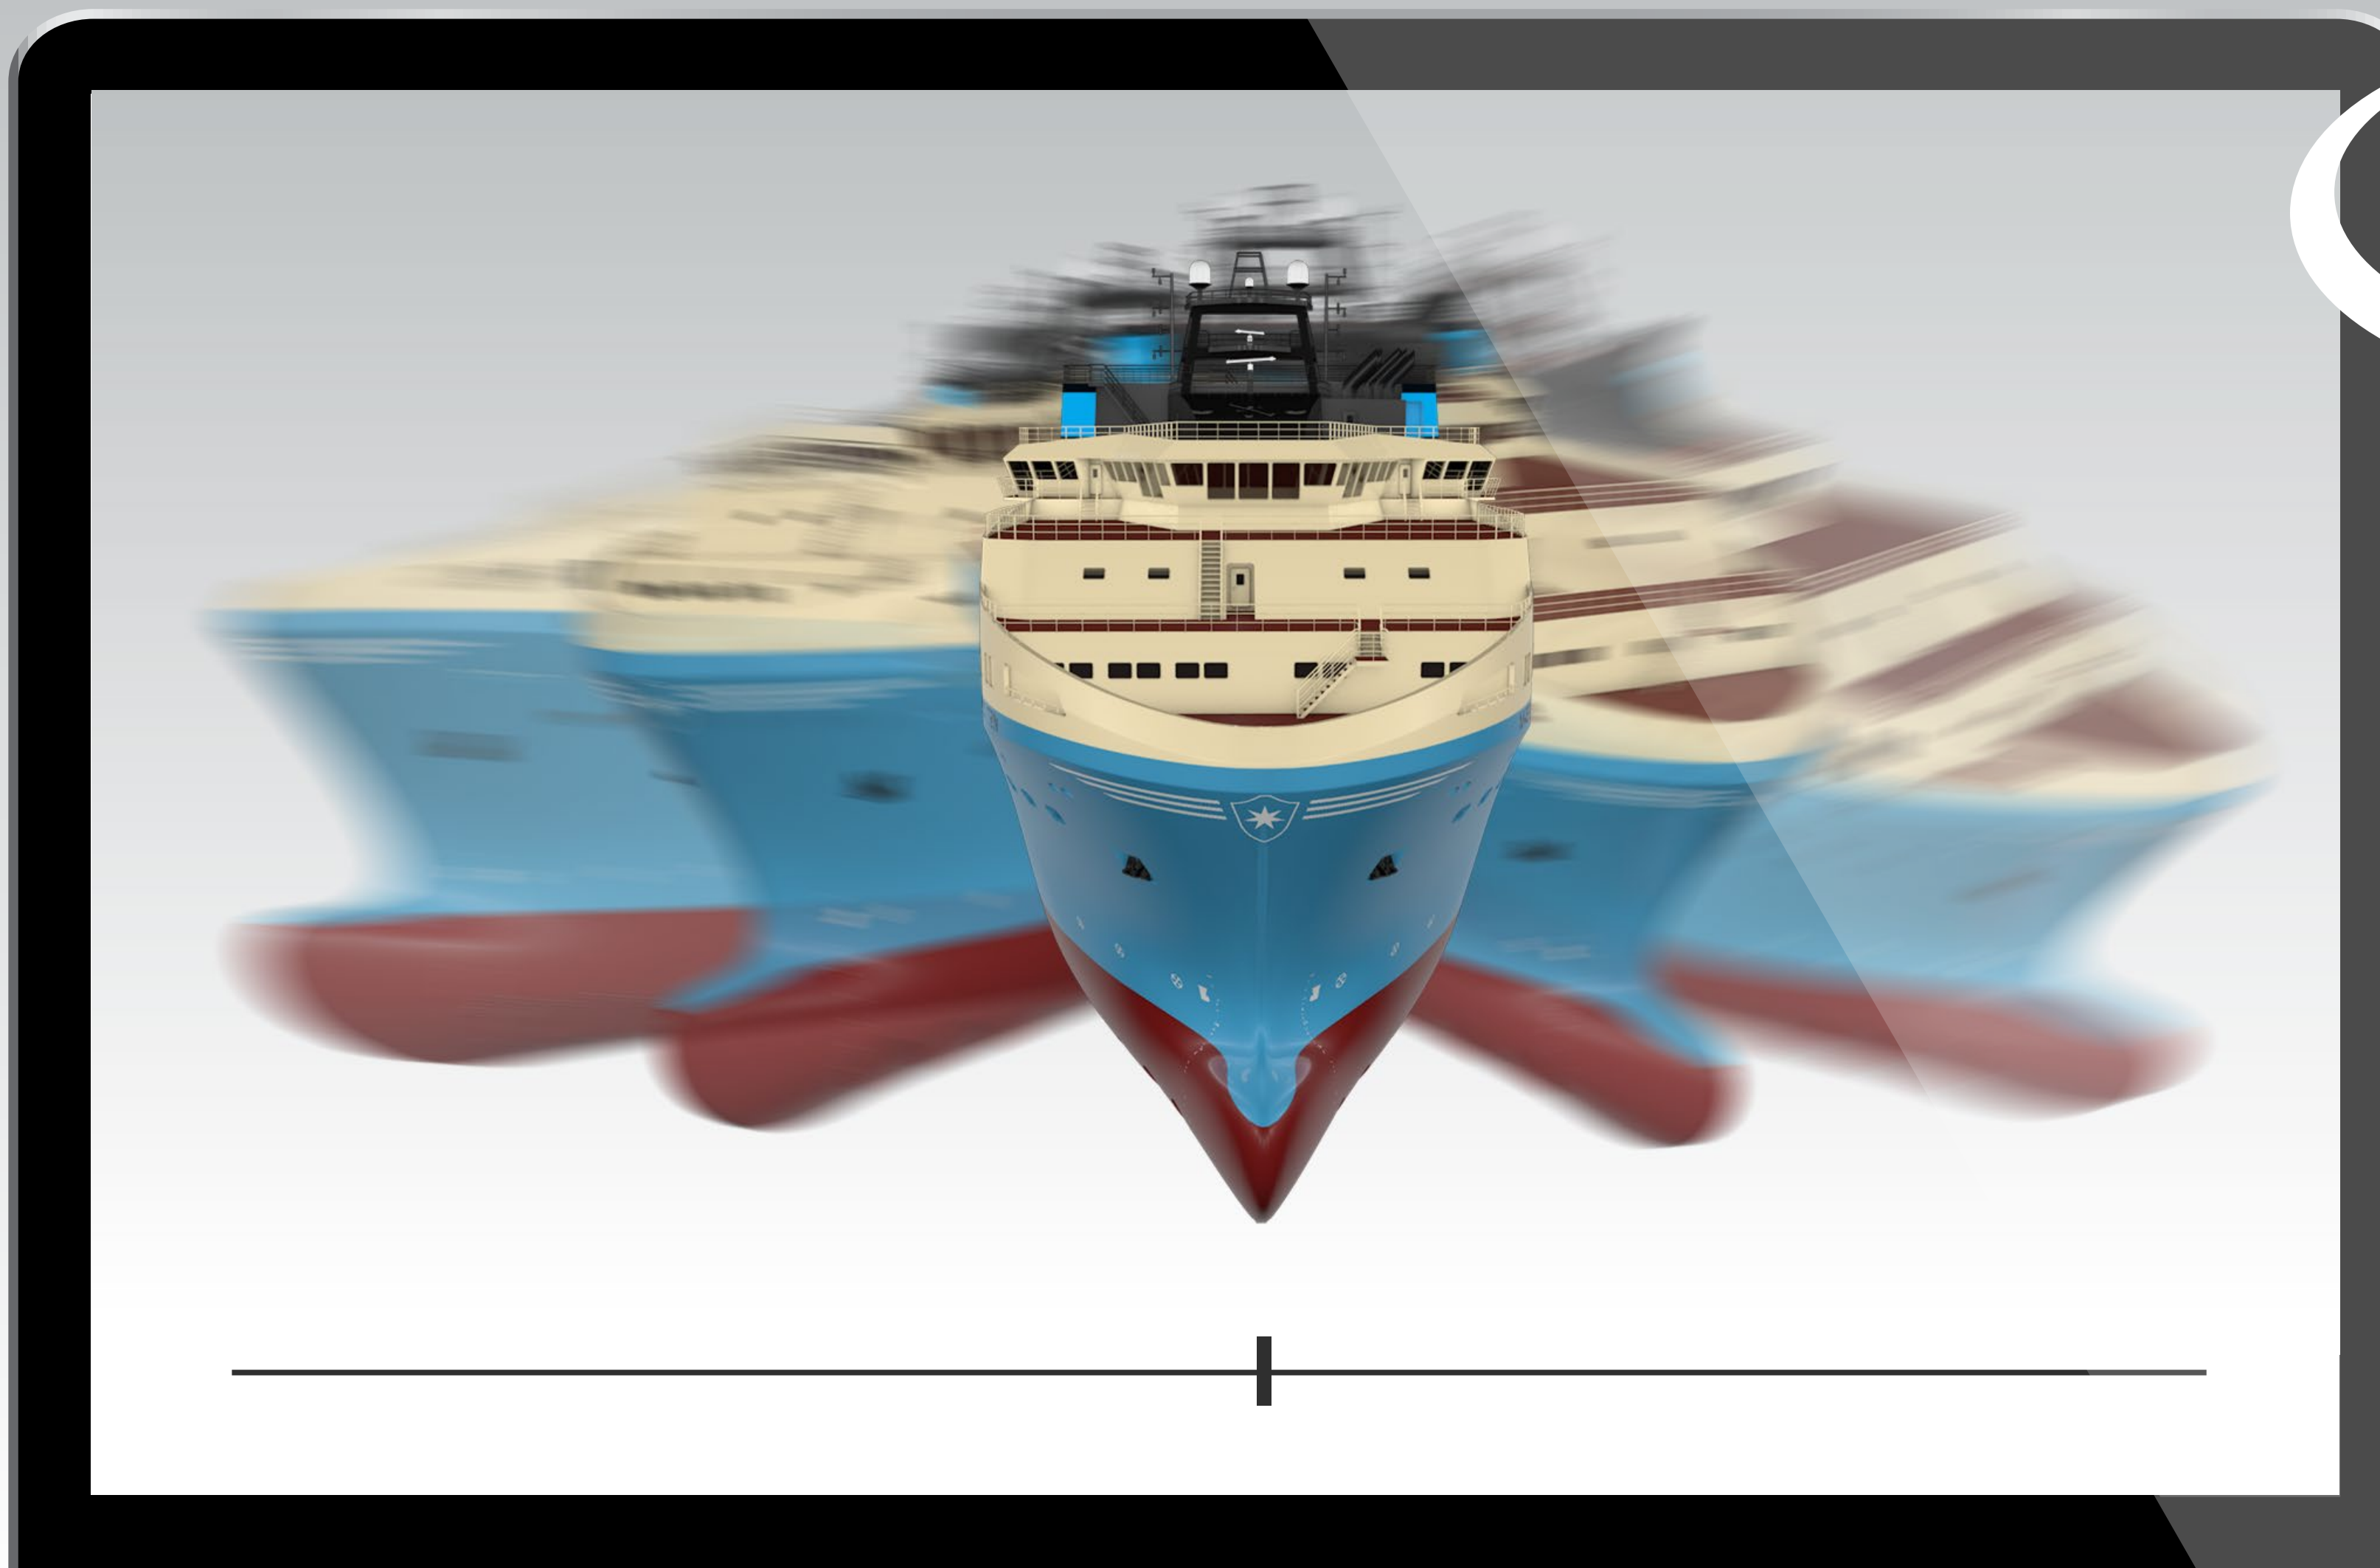

Possibility to make the side windows with an angle outwards.

/ RENDERED STILLS
Conceptual Render

Description: Composed still-frames from a defined camera path. The user can orientate the object by scrubbing the slider.

Purpose: Useful for presenting a product from all perspectives and giving an understanding of the object in 3d space.

/ PRODUCT ANIMATION

Short spec animation with pre-set views (5 design highlights)

DESIGN HIGHLIGHT

Short descriptive text to each highlight

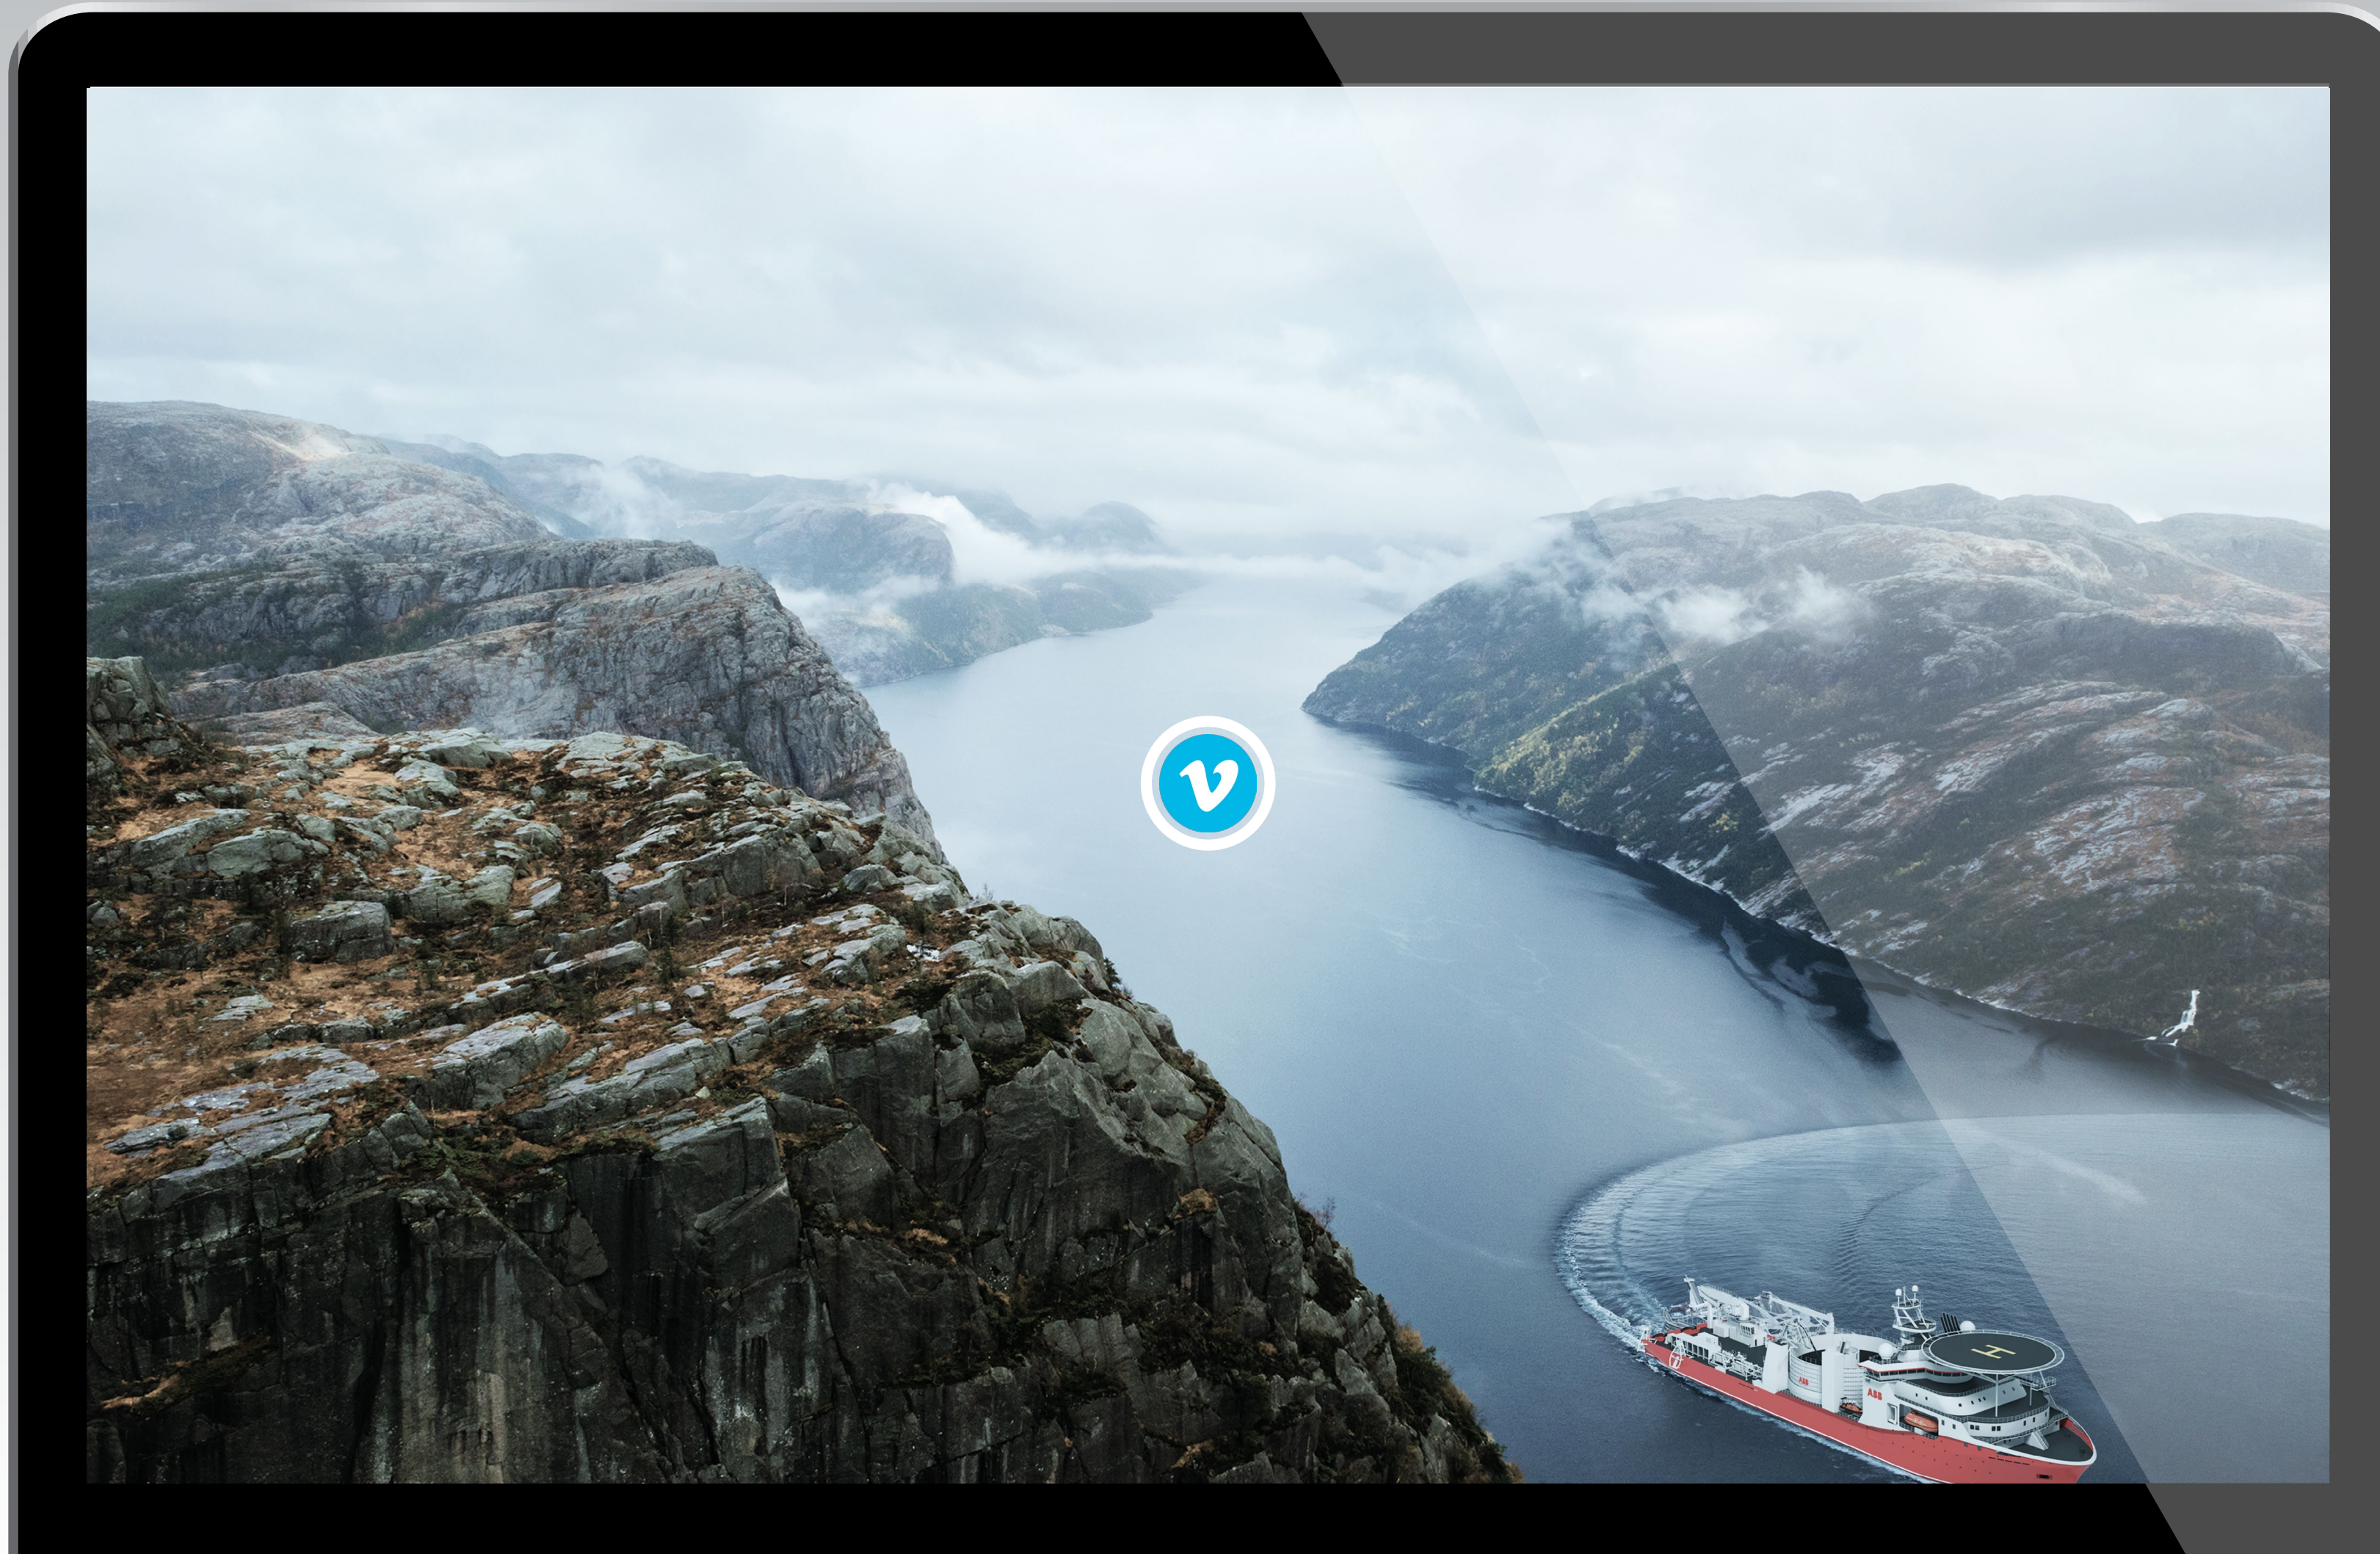

Description: Technical function description - Animated 3D model showing product specifications and advantages.

Purpose: Useful for extended description of product functionality.

/ PRODUCT ANIMATION

3D model in footage

Description: 3D model incorporated in live footage of chosen environment.

Purpose: Useful for showing a product or a situation in real surroundings. Showing origin, relations to locations or scale.

Description: Range of presentations from simple product presentation to more complex concepts presentation. Consisting of 3D animation and film with a descriptive text or voiceover.

Ranging from simple 2 minutes camera animation with standard soundtrack to a 5 minutes directed concept presentation with one fitted soundtrack/Voice in client profile and a combination of animation and film.

Description: Typical two days of on-site filming comprised a film presentation with a custom soundtrack and text or voiceover.

Typical delivery

- Preproduction(Storyboard)
- Production 2 days recording
- Aerial footage
- Post Production

Description: Typical format; 24-sided A3 for printed and digital PDF-version in clients profile. Typical content from design presentation.

Purpose: Distributing and communicating modes, advantages and spec.

Description: Typical format; 2-sided A4 for printed and digital PDF-version. Typical content.

Purpose: Distributing and communicating a short spec.

Description: Typical format; 2-sided A4 for printed and digital PDF-version in clients profile. Typical content.

Purpose: Distributing and communicating a short spec.

Description

Entry level to an interactive presentation built around a 3D model. Presented in a high quality - real-time render.

Navigate the 3D model in an intuitive and active manner that engages the audience.

This entry level model is easy to scale according to varying and developing needs with flexible solutions for portraying information.

Description

An extended interactive presentation with added functionality, such as rigged equipment, predefined configurations of products / systems for studies of layout concepts and information hot-spots placed on native locations on the 3D model.

Navigate and interact with the 3D model to view information presented through media such as film, 3D-animations, images, text, voice, music and documents.
